

SQLGrease was designed and built by a small team of technology enthusiasts. Our team members are passionate about application performance. We build features in SQLGrease based on our combined knowledge of common performance issues.

SQLGrease is the only offering that performs deep dive performance monitoring for SQL Server on a subscription basis. Our cloud platform allows us to continuously improve and add new features. No reinstalls or updates are required with our platform. Additionally we do not charge for new features. Our customers continued business funds our new development efforts.

Key Monitoring Features:

- Query Level Wait Event Analysis
- Historical Execution Plans
- Query IO stats
- Lock Tree Analysis
- Deadlock Analysis
- Configurable Event and Notification engine

Security Features:

- Optional query execution plan and deadlock sanitization. This scrubs any non parameterized sql or execution plan compile parameters for sensitive data prior to transmission.
- SSL communication to SQLGrease services. Traffic is only outbound from your datacenter over standard https.
- Minimum access is required. Only VIEW_SERVER_STATE is required for a majority of features.
