

SQLGREASE QUICKSTART GUIDE

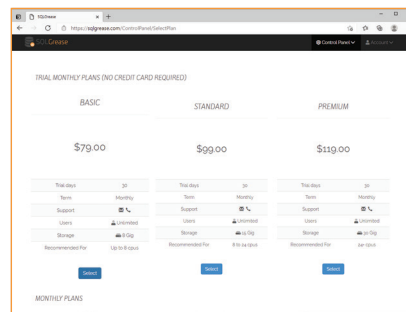

1 Go to the SQLGrease website at <https://sqlgrease.com>. Click the "Register" link at the top of the page.

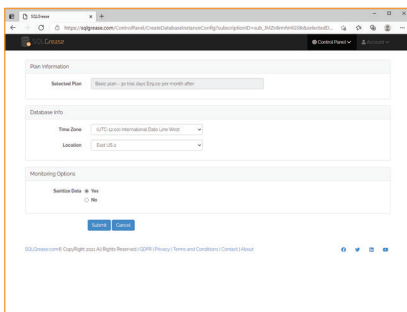

2 Enter your contact and login information. You will be sent a confirmation email to verify that your email address is valid.

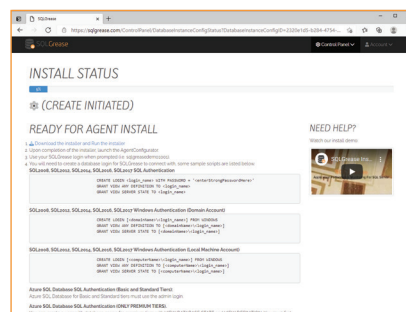

3 After confirming your email address continue by logging in. You should be taken to the WELCOME page. Click the "Get Started" button.

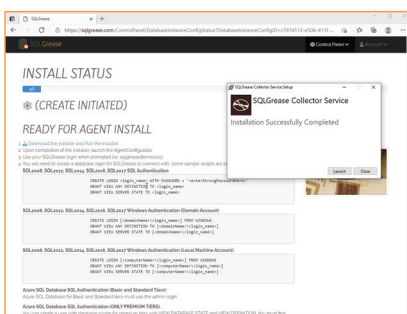

4 Select a plan. Plans differ based on the storage amount. The storage amount is the size of the warehouse where your performance metrics are stored.

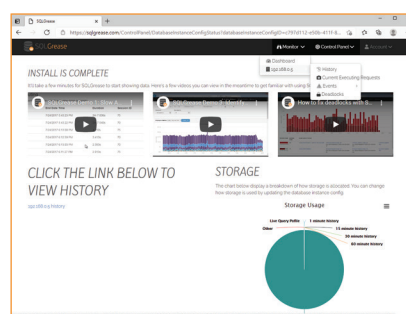

5 Select an appropriate timezone for your data to be displayed in. The location indicates where the datacenter holding your data is located. The sanitize data option masks values in non-parameterized SQL.

6 You will need to download and install the collector and create a login for the collector to connect to SQL with. This page contains information for creating the SQL Server user/login.

7 Once the install is complete, click the "Launch" button to start the configurator. This is where you will enter information used to connect to the monitored server.

8 When the configurator is complete the Install Status page should update to indicate this. A "Monitor" link will appear at the top of the page. We recommend looking at the "History" option to start exploring.
